INVESTOR INTELLIGENCE HEATMAP

General AI Tools

General AI tools, led by ChatGPT, perform a wide variety of automation tasks that incorporate the interpretation of human language and generate responses and insights commonly through a Chat or Search UI. Many general chat AI tools have free and paid layers that enable advanced queries and API integrations. Sectors that are potentially disrupted by General AI tools in its early stages include: Search, Discussion Forums, Social Media, EdTech.

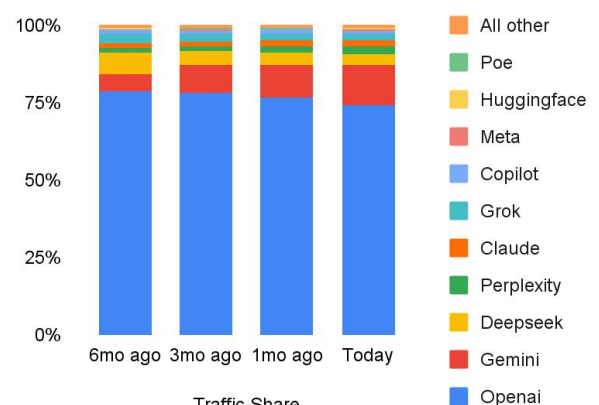

Growth rates are based on total visits at the domain level and do not capture API usage or integrations.

Code Completion & DevOps

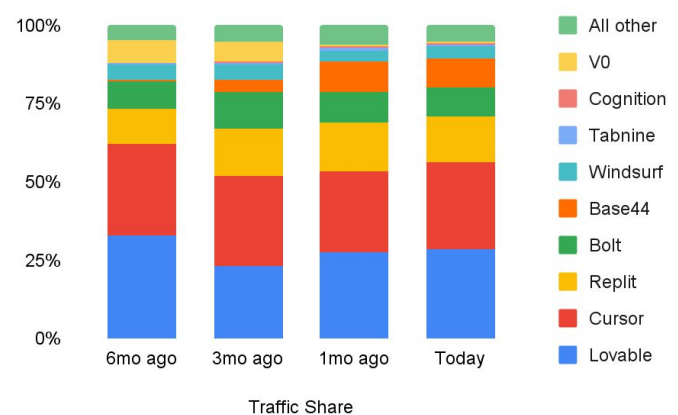

Code Completion & DevOps tools assist developers in writing, testing and debugging software code. These tools analyze existing code and predict the most likely next piece of code, which flagging potential errors, deprecations and areas to drive efficiency. Code completion tools are often embedded inside developer environments, and as a result, the standalone platforms listed below represent a sample of engagement using the available tools. Sectors that are potentially disrupted by Code Completion tools its early stages include: SaaS DevOps & Continuous Integration, Web & App builders, Freelance Platforms

Travel

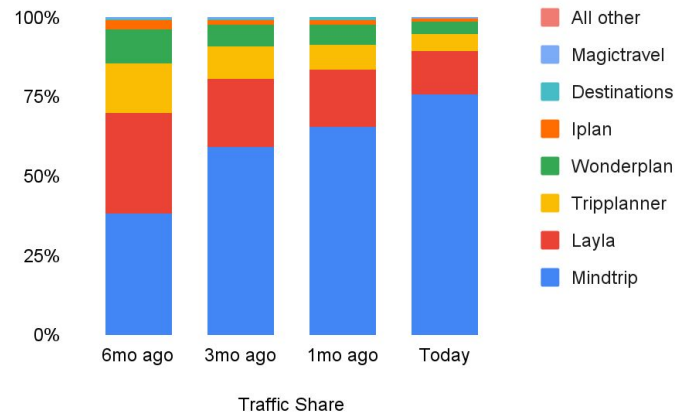

Travel AI tools help users plan, book, and optimize their travel experiences by leveraging natural language processing, real-time data aggregation, and personalized recommendations. These tools can automatically search for flights, hotels, and activities based on user preferences, and even handle itinerary changes or customer support. As these capabilities mature, sectors most likely to be disrupted include: Online Travel Agencies (OTAs), Corporate Travel Management, Concierge Services, and Customer Experience Platforms.

Global Traffic Growth YoY

Appendix

- Heatmap traffic data are segmented into consecutive 2-week periods. Twelve-week (12wk) changes in total visits are calculated by comparing each period to the corresponding 2-week segment from 12 weeks earlier. Year-over-year (YoY) changes are derived by comparing each period to the equivalent 2-week segment from one year ago.
